

The heatmap displays the progression of COVID-19 cases over time, with the x-axis representing dates from May 2020 to December 2021 and the y-axis representing different categories or regions. The color scale indicates the intensity of the cases, ranging from blue (low) to red (high). The visualization shows a significant increase in cases starting around December 2020, peaking in early 2021, and then showing a decline followed by a resurgence in late 2021.
